INFORMATION FOR ORDERING OFFICES

SPECIAL NOTICE TO AGENCIES:

Small Business Participation

SBA strongly supports the participation of small business concerns in the Federal Supply Schedules Program. To enhance Small Business Participation SBA policy allows agencies to include in their procurement base and goals, the dollar value of orders expected to be placed against the Federal Supply Schedules, and to report accomplishments against these goals.

For orders exceeding the micropurchase threshold, FAR 8.404 requires agencies to consider the catalogs/pricelists of at least three schedule contractors or consider reasonably available information by using the GSA Advantage!™ on-line shopping service (www.fss.gsa.gov). The catalogs/pricelists, GSA Advantage! and the Federal Supply Service Home Page (www.fss.gsa.gov) contain information on a broad array of products and services offered by small business concerns.

This information should be used as a tool to assist ordering activities in meeting or exceeding established small business goals. It should also be used as a tool to assist in including small, small disadvantaged, and women-owned small businesses among those considered when selecting pricelists for a best value determination.

For orders exceeding the micropurchase threshold, customers are to give preference to small business concerns when two or more items at the same delivered price will satisfy their requirement.

Contractor shall provide the authorized licensee of the Software with all New Releases. Contractor shall provide telephone support between 07.00 am and 5.30 pm Monday to Friday, Central time, excluding Contractor holidays. Contractor holidays can be found at www.avocent.com/calendar. Contractor shall also provide such other Maintenance Services, as it deems reasonably necessary to cause the Software to perform materially in accordance with the then current Documentation provided that the Government installs all updates, modifications, and corrections provided by Contractor and that the Government's use of the Software is in accordance with this Agreement and the Documentation. Contractor shall use its reasonable efforts to rectify any errors in the Software that the Government brings to the attention of Contractor if Contractor is able to confirm that such error or defect exists through independent testing. When notifying Contractor of an error in the Software, the Government must provide Contractor with an example of the error, the context in which the error was encountered, a description of the system configuration, and the steps necessary to generate or reproduce the error. If requested by Contractor, the Government shall permit Contractor or its representative's full access to the Software and the system on which it is installed during working hours (and any extra agreed cover) so that Contractor can carry out its obligations under this Agreement.

b. Invoices for maintenance service shall be submitted by the Contractor on a quarterly or monthly basis, after the completion of such period. Maintenance charges must be paid in arrears (31 U.S.C. 3324). PROMPT PAYMENT DISCOUNT, IF APPLICABLE, SHALL BE SHOWN ON THE INVOICE.

a. The Contractor shall honor orders for periods for the duration of the contract period or a lesser period of time.

b. Maintenance may be discontinued by the ordering activity on thirty (30) calendar days written notice to the Contractor.

Renewal of the maintenance orders citing the new appropriation shall be required, if the maintenance is to be continued during any remainder of the contract period.

d. Cross-Year Funding Within Contract Period. Where an ordering activity's specific appropriation authority provides for funds in excess of a 12 month (fiscal year) period, the ordering activity may place an order under this schedule contract for a period up to the expiration of the contract period, notwithstanding the intervening fiscal years.

e. Ordering activities should notify the Contractor in writing thirty (30) calendar days prior to the expiration of an order, if the maintenance is to be terminated at that time. Orders for the continuation of maintenance will be required if the maintenance is to be continued during the subsequent period.

6. UTILIZATION LIMITATIONS - (132-33, AND 132-34)

a. Software acquisition is limited to commercial computer software defined in FAR Part 2.101.

b. When acquired by the ordering activity, commercial computer software and related documentation so legend shall be subject to the following:

- 1) Title to and ownership of the software and documentation shall remain with the Contractor.
- 2) Avocent DS-Series Software – The software product is a commercial product, developed at private expense, and provided with restricted rights. If the Government has acquired a single copy license, the Government may install and use one copy of the software product on a single computer. If the Government has acquired the software product in an Avocent "Client License Pack" for multiple copies of the software product, the Government may install and use concurrently not more than the number of copies of the computer software portion of the software product identified in the Client License Pack or on the "Systems" tab of the software product. Neither the software product nor the hardware product shall be used in connection with any system where malfunction can reasonably be expected to result in personal injury, death, or damage to tangible property or the environment. Without limiting the foregoing, neither the software product nor the hardware shall be used in connection with any life support or patient care system, nuclear facility, aircraft operation, air traffic control, or other application representing a similar degree of hazard.
- 3) Software licenses are by site and by ordering activity. An ordering activity is defined as a cabinet level or independent ordering activity. The software may be used by any subdivision of the ordering activity (service, bureau, division, command, etc.) that has access to the site the software is placed at, even if the subdivision did not participate in the acquisition of the software. Further, the software may be used on a sharing basis where multiple agencies have joint projects that can be satisfied by the use of the software placed at one ordering

activity's site. This would allow other agencies access to one ordering activity's database. For ordering activity public domain databases, user agencies and third parties may use the computer program to enter, retrieve, analyze and present data. The user ordering activity will take appropriate action by instruction, agreement, or otherwise, to protect the Contractor's proprietary property with any third parties that are permitted access to the computer programs and documentation in connection with the user ordering activity's permitted use of the computer programs and documentation. For purposes of this section, all such permitted third parties shall be deemed agents of the user ordering activity.

- 4) Except as is provided in paragraph 8.b(3) above, the ordering activity shall not provide or otherwise make available the software or documentation, or any portion thereof, in any form, to any third party without the prior written approval of the Contractor. Third parties do not include prime Contractors, subcontractors and agents of the ordering activity who have the ordering activity's permission to use the licensed software and documentation at the facility, and who have agreed to use the licensed software and documentation only in accordance with these restrictions. This provision does not limit the right of the ordering activity to use software, documentation, or information therein, which the ordering activity may already have or obtains without restrictions.
- 5) The ordering activity shall have the right to use the computer software and documentation with the computer for which it is acquired at any other facility to which that computer may be transferred, or in cases of disaster recovery, the ordering activity has the right to transfer the software to another site if the ordering activity site for which it is acquired is deemed to be unsafe for ordering activity personnel; to use the computer software and documentation with a backup computer when the primary computer is inoperative; to copy computer programs for safekeeping (archives) or backup purposes; to transfer a copy of the software to another site for purposes of benchmarking new hardware and/or software; and to modify the software and documentation or combine it with other software, provided that the unmodified portions shall remain subject to these restrictions.
- 6) "Commercial Computer Software" may be marked with the Contractor's standard commercial restricted rights legend, but the schedule contract and schedule pricelist, including this clause, "Utilization Limitations" are the only governing terms and conditions, and shall take precedence and supersede any different or additional terms and conditions included in the standard commercial legend.

7. SOFTWARE CONVERSIONS - (132-33) Full monetary credit will be allowed to the ordering activity when conversion from one version of the software to another is made as the result of a change in operating system, or from one computer system to another. Under a perpetual license (132-33), the purchase price of the new software shall be reduced by the amount that was paid to purchase the earlier version.

8. DESCRIPTIONS AND EQUIPMENT COMPATIBILITY The Contractor shall include, in the schedule pricelist, a complete description of each software product and a list of equipment on which the software can be used. Also, included shall be a brief, introductory explanation of the modules and documentation which are offered.

9. RIGHT-TO-COPY PRICING No right-to-copy licenses are available under this contract.

Power IQ manages all your ethernet enabled rack power distribution units and in-line meters from one system including APC, Server Technology, Raritan and more.

Power IQ automates power control and enables powerful analytics reporting of your energy consumption, temperature readings, active power, line capacities and carbon footprint. Trending reports and cumulative totals can be displayed at the data center, floor, room, rack, customer and IT device level. You can also generate customer energy billback cost reports.

Note: The term “Devices” is equivalent to a rack PDU. For example 20 Dominion PXs = 20 devices.
